Practical Assignment 3

<u>שמות חברי הקבוצה:</u>

דוד חי אלבז - 207441627 דור אוקבי - 207441627 עדן יעקובי - 206510885 איתי מסיקה - 207328618 רוזה יוסופוב - 212997845 יהונתן אריה - 211746839 נועם פרנסה - 211746839

What have we changed?

- 1) Added one integration related method to the code. The main integration in this part was between the Inventory module and the Transportation module. This new method integrates between the two modules by letting the Transportation module query an inventory product by its name. We have also updated the reservation method to allow the system to create a new transport request in case some supplier is not able to deliver its own products. In such cases the Super itself opens a new transfer request to deliver the products.
- 2) Adjusted all the CLI menus so that each menu will be role-specific.
- 3) Added GUI based menus for each one of the roles: StoreManager, HRManager, SuppliersManager, WarehouseEmployee, TransportationManager, as indicated in the bonus.
- 4) Added the DB layer classes to the class diagram from the previous assignment.
- 5) Updated the system requirements to match with the latest additions and assignment descriptions.
